### Precision Tire Balancer Instruction Manual

### LOSA99176

Thank you for purchasing the Team Losi Racing Tire Balancer. We are confident this is the most innovative tire balancer on the market. Please read these instructions to understand how to balance your tires properly. A complete set of balanced tires will increase runtime, improve traction and stability and improve the life of drivetrain and suspension components.

#### Parts List

Part Number	Description	Retail
LOSA99177	Tire Balancing Clay, 3 oz.....	\$3.99
LOSA99178	Tire Balancer Handle Set.....	\$9.99

1. Insert the tire balancer handle into balancer arm and tighten.

2. Insert the wheel nut into the wheel and lock the hex into place.

3. Insert the wheel nut into the spindle of the tire balancer and tighten.

4. Spin the tire slowly to determine the unbalanced portion of the tire.

5. Remove a small amount of balancing clay to start balancing the tire. Prior to applying the balancing clay make sure the wheel is clean.

6. Once the tire has come to a complete stop apply a small amount of clay to the top inner part of the wheel.

7. Spin the tire slowly to see if the tire is now balanced. The tire is fully balanced when the balancing weight is halfway between the top and the bottom as shown. This may take some time to get correct as more or less balancing clay is needed to make the tire perfectly balanced.
